

Major know-how is often apparent in the smallest details.

Heinrichs – It’s our turn

Heinrichs Drehteile is one of Germany’s leading manufacturers of precision turned parts. Over 80 years of experience in development and manufacturing have contributed to our first-rate solutions for sealing plugs with soft seals, vent valves, and oil sight-glasses.

Turned parts from Heinrichs have been used in the American Market for many years, where mechanical engineering companies and suppliers for the automotive industry have relied on the quality and reliability of our products.

State-of-the-art machine park due to a sustainable investment philosophy

Our innovative products can be found worldwide in hydraulic applications, drive technology, pneumatics, and the automotive field. We manufacture according to DIN, our own standards, and customer specifications. We offer a broad range of thread types, hexagon socket and hexagon heads, various materials and coatings.

We are convinced that our sustained actions are the basis for our corporate success. As a family enterprise in the 3rd generation we are committed to our employees and business partners. We maintain long-term partnerships with our customers as well. Reliability, stability, and quality are our hallmarks.

Since 2007, we have achieved this goal with our own locally managed warehouse with most customers receiving their order the next day. Based in Northern Kentucky, our warehouse stocks a large number of standard parts, especially convenient for small quantity orders. We also stock common dimensions for sealing plugs with captive sealing rings, vent valves, and oil sight glasses. All of these parts have been manufactured according to Heinrichs own standards (HN) or international standards (DIN, ISO). We offer custom inventory solutions for customer orders, eliminating import hassle and lowering total transportation and inventory management costs.

Equipment and competency

- 50 multispindle automatic lathes
- 10 CNC single spindle automatic lathes
- 40 special machines
- DIN parts | in-house developed parts | drawing parts
- Prototypes | small series | large series
- Series production Ø 2.5 – 160 mm (Ø 0.098" – 6.299")
- Steel | stainless | aluminum | brass | copper | special steels

Automotive | Drive Technology | Hydraulics | Pneumatics | Electrical Industry

It’s our turn!
